SITE INVESTIGATION/CLEANUP DOCUMENTS

DTSC approved the technical memorandum (TM) for additional site investigation near Wyle's northwestern property boundary. The TM addresses sampling on residential properties along Golden West Lane. This scope of work was prepared in response to off-site detections of TCE along Golden West Lane.

Wyle submitted the combined Monthly /Quarterly Project Status Update. DTSC will review the update and discuss any issues with Wyle.

DTSC received comments on the Remedial Investigation (RI) Workplan from Kleinfelder, City of Norco Consultants and community members. A request was received from the Community Advisory Group to extend comment period on the RI Workplan until June 25, 2004. DTSC granted this request. This is not a formal comment period, however, in an effort to be responsive to community/CAG issues DTSC is accepting feedback on the RI Workplan in the form of comments.

DTSC's review of the Remedial Investigation Workplan is near completion.

INVESTIGATION/CLEANUP FIELD WORK:

Operation of the groundwater cleanup system is ongoing. DTSC staff observed influent/effluent water and air sampling procedures on the treatment system.

Soil gas sampling on residential properties along Golden West Lane was conducted by Environ with DTSC oversight. Samples were collected from 3 houses on each side of the street, and 2 to 3 locations were sampled at each house. Samples were collected at 5 feet below ground surface and at 9 to 12 feet, if possible. Preliminary sampling results will be released within 3 to 4 weeks.

PUBLIC PARTICIPATION:

DTSC coordinated sampling on Golden West Lane residential properties with the property owners.

DTSC held a community meeting on June 14, 2004. DTSC updated the community on the project status, provided information pertaining to boundary assessment on Golden West Lane, and answered questions on the project. Several issues/concerns were raised at the community meeting. DTSC noted the concerns/issues and will build into its investigation an appropriate response to each issue.
